School climate survey data

“The annual school survey is given to students in grades 3 to 12, all school-based staff, and parents of students in pre-K to grade 12. Three separate indices were calculated that represent a combination of student, staff, and parent reports. They reflect key measures of school climate as defined by the National School Climate Center. Data are not reported when any of the three groups had 5 or fewer respondents, or if the response rates for students or staff were less than 30 percent. The Physical Security Index measures the extent to which students and staff feel safe in a school building, parents feel that their child is safe, and students fighting and bringing weapons to school is not a problem. The Respectful Relationships Index measures the extent to which students and staff report that there are respectful relationships among students and between students and staff at their school. The School Connectedness Index, which was introduced in 2012–13, measures the extent to which students and staff feel they belong at the school, that parents feel welcome, that staff and parents work closely to meet students’ needs, and that the administration is responsive to parent and staff concerns. Data are for the school year ending in the calendar year indicated (i.e., “2014” indicates the 2013–14 school year).”² Each index has a possible value from 0–100.
